
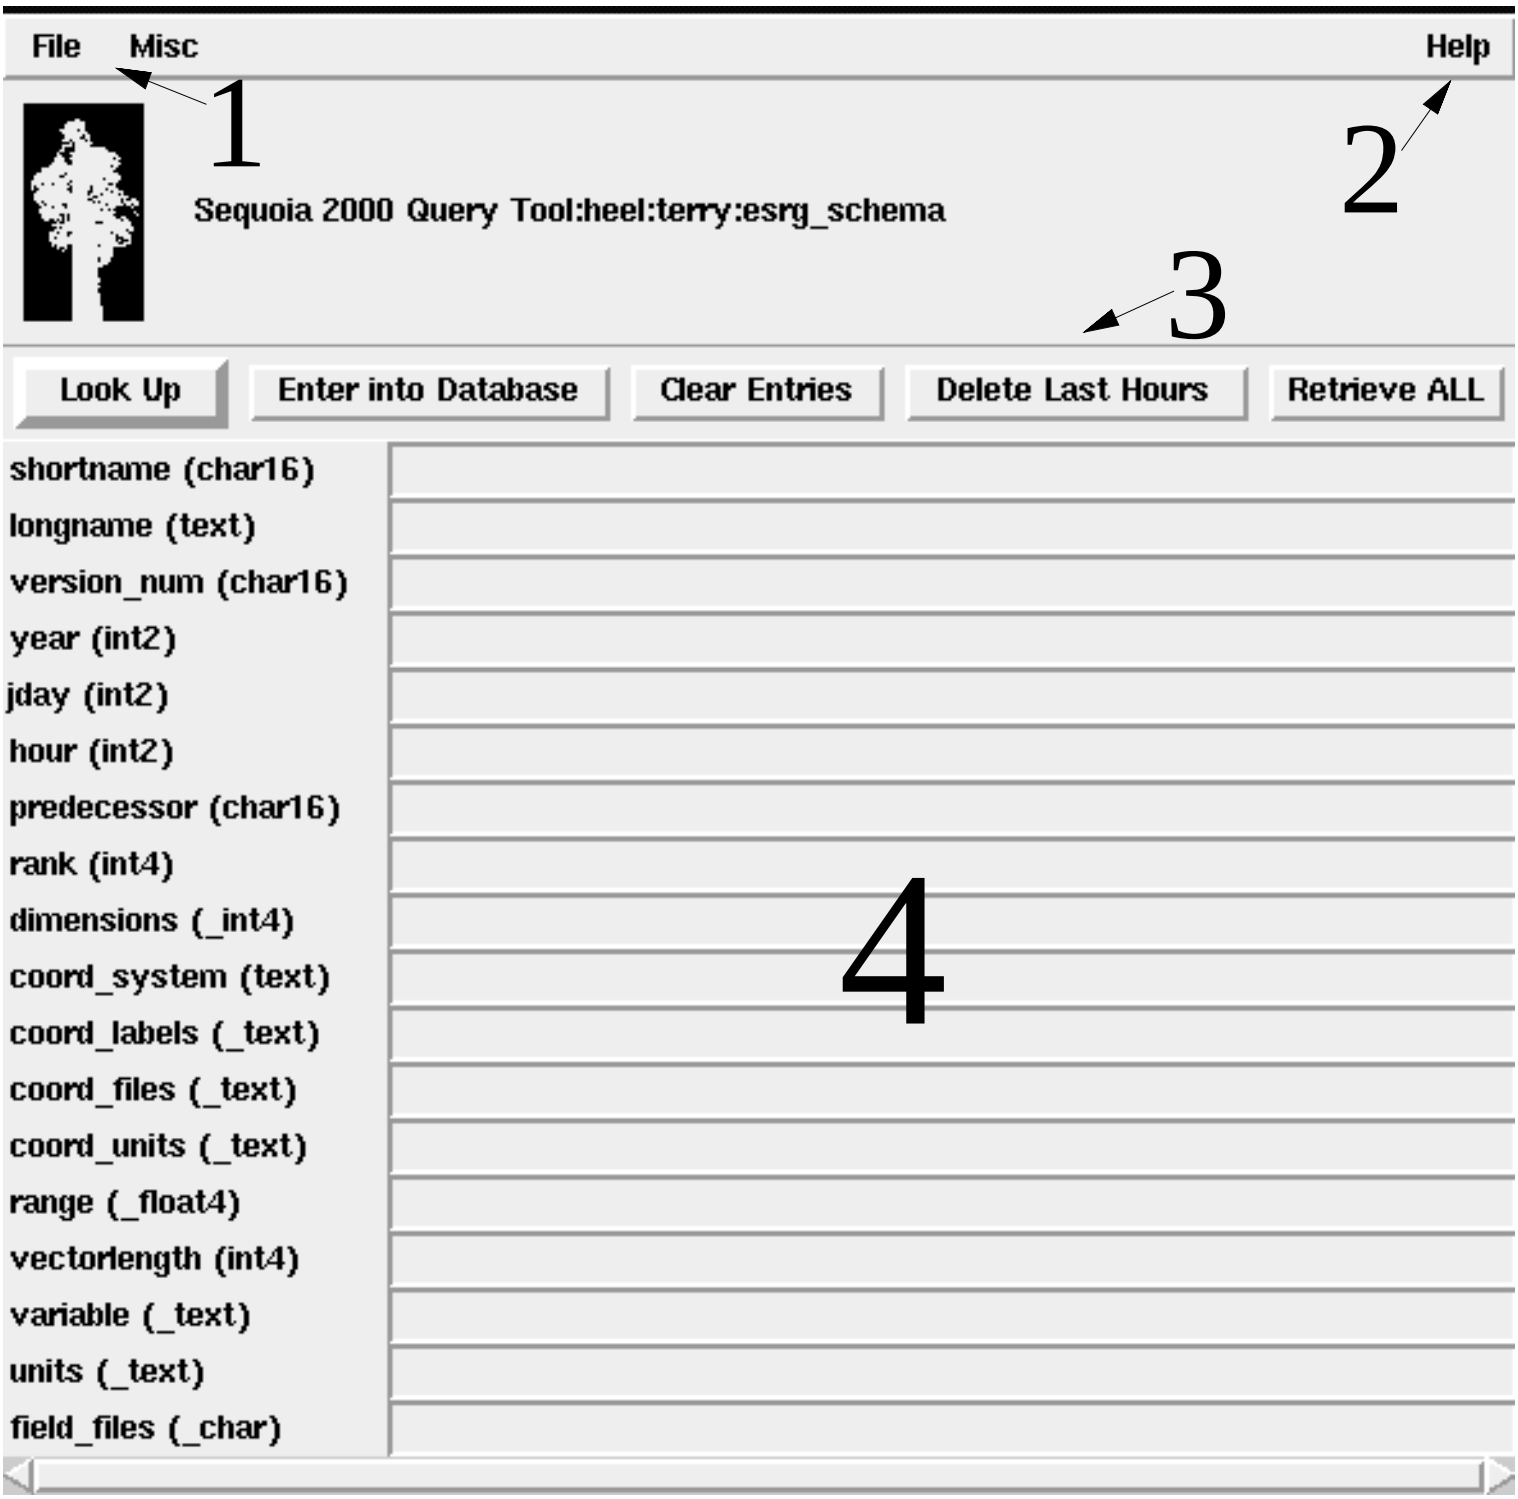

Figure 1. The Main Query tool window

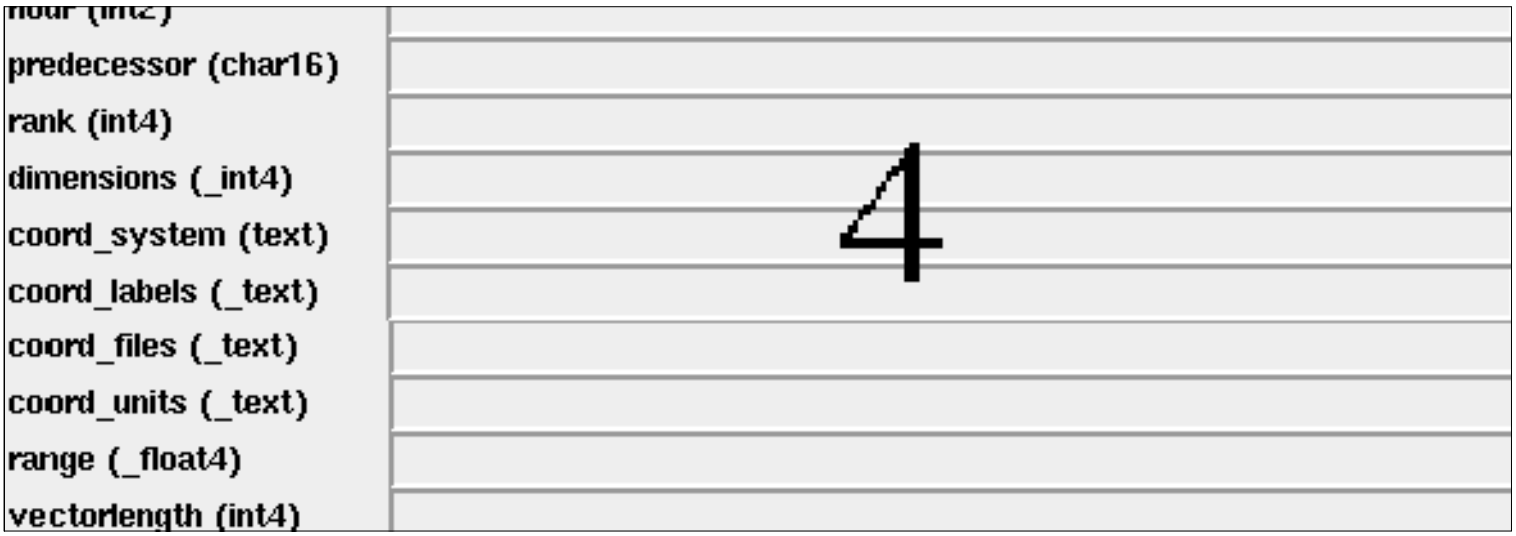

Figure 5. The Entry fields- here is where you enter information to query on

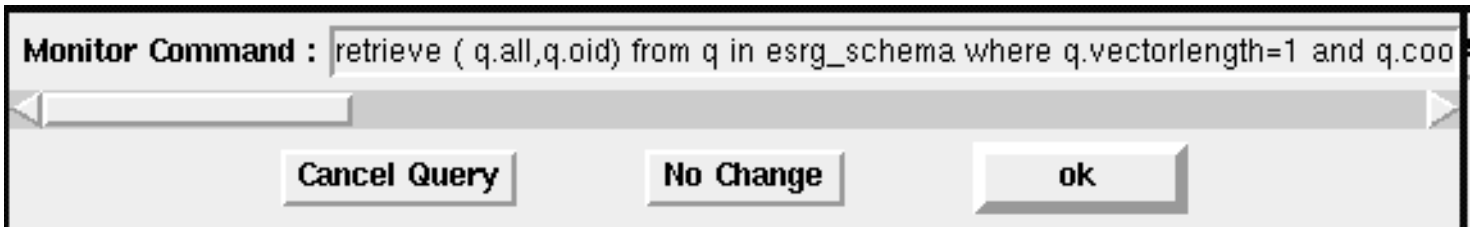

Figure 6. The Edit Query window: this allows you to edit the postquel before sending it to monitor

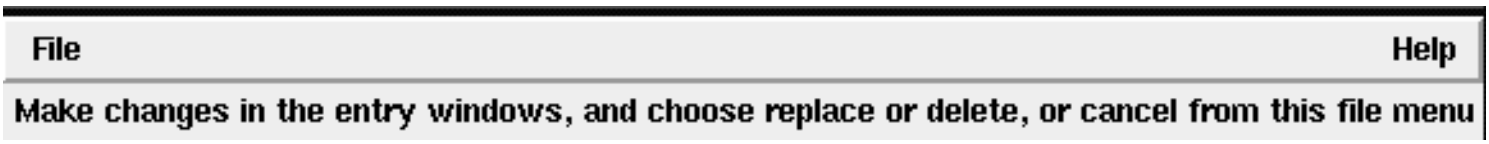

Figure 7. The Edit Instance window: When you double-click on an instance in the output window, it allows you to edit or delete the instance, those options & cancel are in this menu

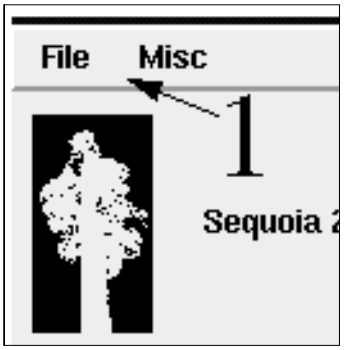

Figure 2. The Menus: the File menu contains the commands to send queries to the postgres backend. The Misc menu contains some commands that users might find useful, such as toggle edit query, which allows the user

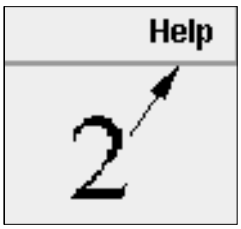

Figure 3. This is the help feature built in to the browse tools, all the entries in the menus will have help here.

Figure 4. The Buttons: the buttons are duplicates of the functions of the file menu, they were put here to make it a little quicker to use.

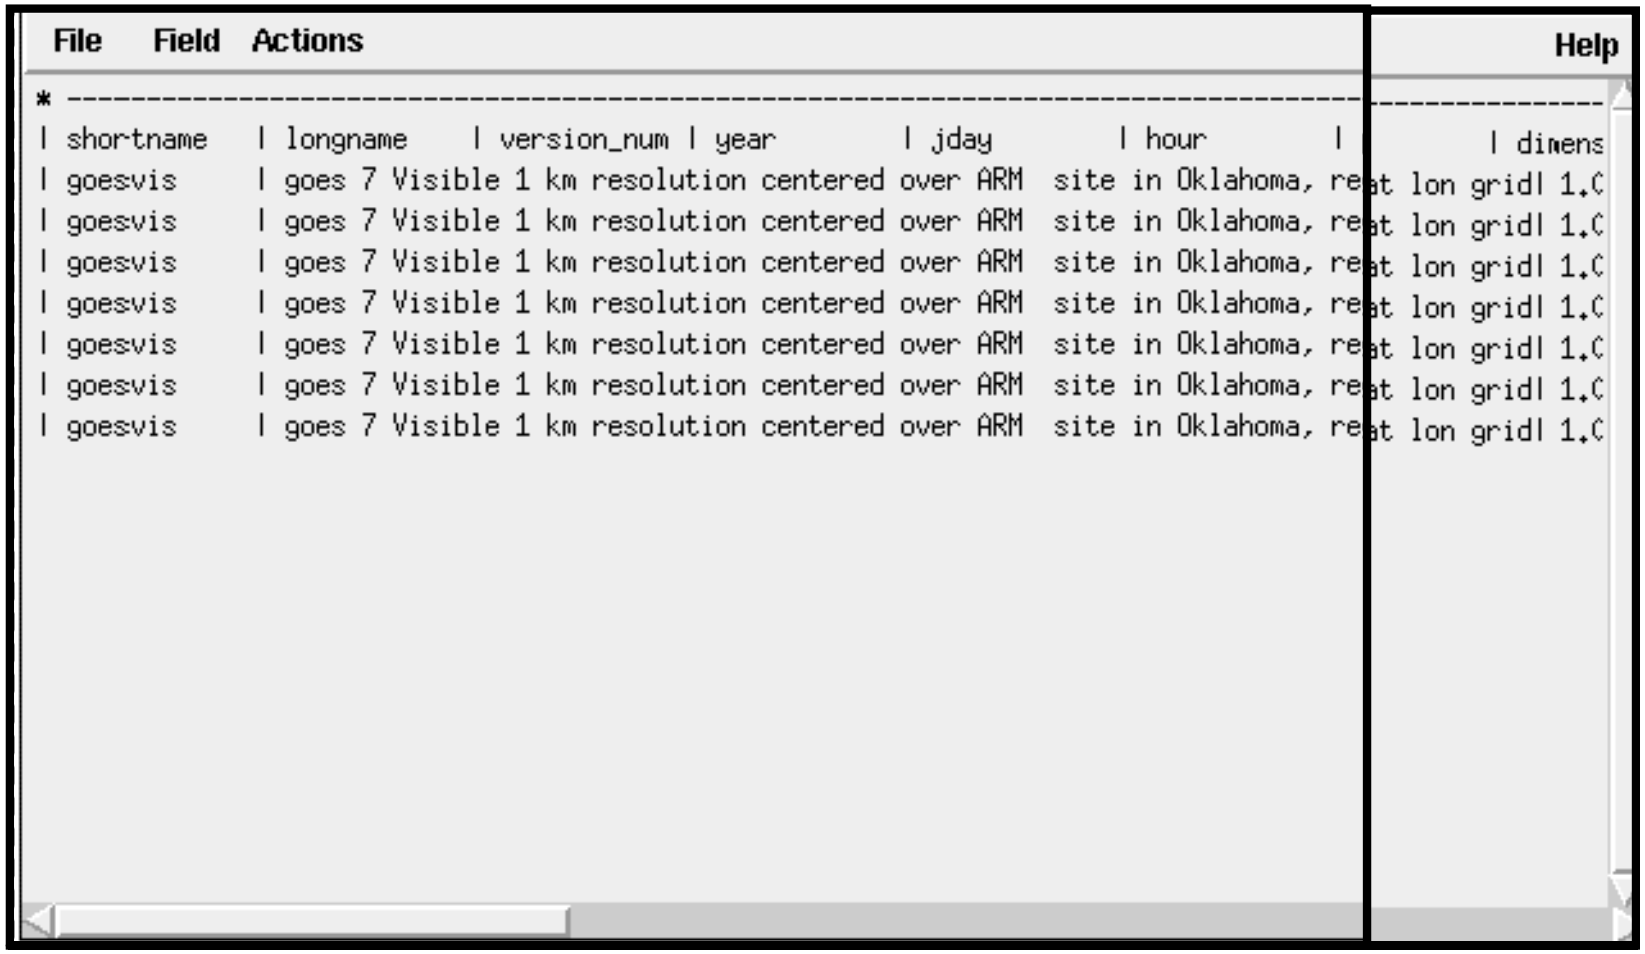

Figure 8.The Output Window: This window displays the output of the monitor command. It allows you to perform actions on an instance or instances. Current actions are IDL display, jget, pcat, and xgraph.
